Summary:	• 13+ years of professional experience in the Information Technology industry; • Solid experience in development using Java and related technologies; • Extensive experience in embedded systems; • Strong expertise in software life-cycle (design, development, delivery, deployment, and support); • Good knowledge of web programming and Internet protocols; • Experience in major web programming languages, databases, and operating software; • Experience with database development (MS SQL, MySQL, SQLite, PostgreSQL); • Strong problem-solving and communication skills, significant time management skills; • Experience in gathering requirements, establishing development goals, and estimating tasks and projects.	
Activities:	• Design and implementation of back-end business functions in Java/Kotlin • Design and implementation of automated process workflows • Supporting teammates (generally QA) in finding root causes of issues • Investigations of issues in the production and report generation (if requested) • New releases preparation and deployment • Writing bash scripts for scheduled executions • Coaching and mentoring newcomers • Managing the development team • Application development and support • Coaching and mentoring newcomers • Periodical L3 Support • POCs development • Technical analysis and initial estimations • Hosting technical presentations and trainings with clients • Writing/updating relevant documentation • Writing/updating relevant tests	
Education:	• Bachelor's Degree, Informatics and Computer Science Department, Armenian North University, Armenia; • Bachelor's Degree, Software and Computer Security Department, Armenian Open University, named after L. Kalashyan, Armenia.	
Work experience:	DataArt Solutions, Inc. (www.dataart.com) Senior Software Developer	2020 – Present
	Energize Global Services, CJSC (energizeglobal.com) Senior Software Developer	2018 – 2020
	Synergy International Systems (www.synisys.com) Software Developer	2012 – 2018
Skills:	Java, JavaFX, Kotlin, JPQL/SQL, HTML, CSS, JavaScript, ReactJS, VBA, Shell, Python, Servlets, JSP, JSF2, JPA, Spring (IoC, Security, REST, MVC, Data), Camunda BPMN, Apache Kafka, Avro, Hibernate, Jackson Mapper, Log4j, SLF4J, Bootstrap, MySQL, MS SQL Server, SQLite, PostgreSQL, Oracle, JDBC, Hibernate, Junit, TestNG, Mockito, Gerrit, Jenkins, Docker, K8s, Git, Subversion (SVN), Maven, Gradle, Apache Tomcat, JBoss, Jira, IntelliJ IDEA, DataGrip, Microservices Architecture, concurrency/multithreading	

Recent Projects:

Learning Platform Back-end Services Implementation

Client:	Company-internal learning platform
Description:	Developed an internal system that allows the employees to login and pass quizzes to check their knowledge levels helping them develop strong knowledge on the new technologies and skills.
Languages:	Java
Environments:	Spring, PostgreSQL, Mockito, JUnit, Gradle, GIT, Docker
Position:	Software Developer
Activities:	• Implementation and bug-fix on Java-based back-end service • Writing/updating relevant tests • Supporting teammates (generally Front-end and QA) in finding root causes of issues

Back-end Services Implementation for an Info-Sec

Client:	Info-Sec company
Description:	Implemented and improved the existing back-end micro-services for the one of the leading Info-Sec companies in the market. The system was receiving, processing and storing the incoming data to be used by the other services later. As an addition I've implemented a utility apps for internal use to help other development teams in their migrations and tests.
Languages:	Java
Environments:	Spring, PostgreSQL, Mockito, JUnit, Gradle, GIT, Docker
Position:	Software Developer
Activities:	• Implementation and bug-fix on Java-based microservices • Writing/updating relevant documentation • Writing/updating relevant tests • Supporting teammates (generally QA) in finding root causes of issues • Implementation of additional small utility applications to support development teams with routine automated stress tests of migrated apps

Back-end Services for Bank Web and Mobile Applications

Client:	Financial company
Description:	Developed and improved back-end micro-services serving bank web and mobile applications.
Languages:	Java / Kotlin
Environments:	Spring, PostgreSQL, RabbitMQ, Mockito, JUnit, Gradle, Maven, GIT, Docker, K8s
Position:	Software Developer
Activities:	• Implementation of business functions at the Java / Kotlin back-end • Writing/updating relevant documentation • Writing/updating relevant tests • Writing/updating process workflows • Supporting teammates (generally QA) in finding root causes of issues • Investigations of issues in the production and report generation (if requested) • New releases preparation and deployment

Bank Client Requests Processing Automation System

Client: Financial company
Description: Worked on development of a fully automated bank back-processing system that covers almost all the internal processing operations starting from receiving client's requests up to contracts signing.
Languages: Kotlin
Environments: Spring, Camunda BPMN, Kafka, Mockito, JUnit, Gradle, GIT, Docker, Avro
Position: Software Developer
Activities:

- Implementation of business functions at the Kotlin backend;
- Writing/updating relevant documentation;
- Writing/updating relevant tests;
- Writing/updating process workflows;
- Supporting teammates (generally QA) in finding root causes of issues.

Bank Internal Operations Management System

Client: Financial company
Description: Developed a tool for managing bank's internal processing tasks.
Languages: Java, JSP, SQL/JPQL
Environments: Hibernate, Mockito, JUnit, TestNG, Oracle DB, Maven, GIT, Jenkins, SoapUI, JBoss, Linux Bash scripting
Position: Software Developer
Activities:

- Implementation of business functions at the Java backend;
- Writing/updating relevant documentation;
- Writing Bash scripts for scheduled executions;
- Coaching and mentoring newcomers.

Data Management System

Client: US-based IT company
Description: Worked on development of a large data management application for various governmental and non-governmental organizations. The system allowed users to store and analyze incoming data and create various charts and reports based on the specified filters.
Languages: Java, JavaScript, SQL
Environments: JEE, JSF, Spring Framework, Spring Security, JDBC, REST, JUnit, Mockito, jQuery, HTML, CSS, MS SQL, Maven, GIT, Gerrit, Jenkins, Apache Tomcat, Linux Bash scripting
Position: Software Developer
Activities:

- Managing the development team
- Application development and support
- Coaching and mentoring newcomers
- Periodical L3 Support
- POCs development
- Technical analysis and initial estimations
- Hosting technical presentations and trainings with clients
